Re: Contributions to Orbital Anatomy Course

Dear Aaron & Golda:

On behalf of the University of Louisville and the University of Kentucky Departments of Ophthalmology, I want to convey my sincerest thanks for your contribution of \$1000.00 toward the expenses associated with our annual orbital anatomy course, and for the contribution of seven (7) nonsterile Flor-Tec implants. This cadaver-based course is highly effective in educating our ophthalmology residents in orbital anatomy, and provides a medium for demonstrating oculofacial surgical techniques. Your Flor-Tec implants enabled us to demonstrate the surgical approach and repair technique for orbital floor and medial wall fractures which is an integral portion of our training curriculum.

Our annual orbital anatomy and dissection course was held on Friday, February 5, 2016 and again received very positive feedback from the residents regarding its effectiveness.

Thank you again for your support of this course, it is truly appreciated!

Best regards,

William R. Nunery, MD
